COMPUTER SCIENCE(083)PROJECT

Hotel Management System(HMS)

Submitted By-ADARSH KUMAR PANDEY
Roll No.:23699262
Class-12 "A"
Submitted To- MR.SANTOSH KUMAR (PGT)CS

CERTIFICATE

This is to certify that ADARSH KUMAR PANDEY of Class: XII Science of K.V.MAU has successfully completed the project on the Topic: "HOTEL MANAGEMENT SYSTEM" under the guidance of MR. SANTOSH KUMAR (P.G.T. Computer Science).This project can be approved as a part of C.B.S.E. in the session 2021-22.

Signature of guide:

MR.SANTOSH KUMAR

ACKNOWLEGDEMENT

I would like to acknowledge all those without whom this project would not have been successful. Firstly, I would wish to thank our Computer Science teacher Mr. Santosh Kumar Sir who guided me throughout the project and gave his immense support. He made us understand how to successfully complete this project and without him, the project would not have been complete.

This project has been a source to learn and bring our theoretical knowledge to the real-life world. So, I would really acknowledge his help and guidance for this project.

I would also like to thank my parents who have always been there whenever needed

.

Once again, thanks to everyone for making this project successful.

Introduction

Hotel Management System is a software system where the management of entire hotel is computerized. The hotel management system is designed using Python as front end and MySQL as the backend database.

In this project the details are maintained like customer

details, reservation details, Booking details and billing details.

Using the hotel management system, the following activities can be

performed.

- Room Service
- Check In
- Check Out
- Login

MySQL

- **Host-** 'LOCALHOST'
- **User-**'ROOT'
- **Password-**'123456'
- **Database-HOTEL**

Table Used:-

```
mysql> show tables;
+-----------------+
| Tables_in_hotel |
+-----------------+
| bill            |
| booking         |
| customer        |
| rooms           |
| setting         |
+-----------------+
5 rows in set (0.00 sec)
```

Table BILL:

```
mysql> desc bill;
+-----------+-------------+------+-----+---------+----------------+
| Field     | Type        | Null | Key | Default | Extra          |
+-----------+-------------+------+-----+---------+----------------+
| bill_id   | bigint      | NO   | PRI | NULL    | auto_increment |
| book_id   | bigint      | YES  |     | NULL    |                |
| amount    | float(10,2) | YES  |     | NULL    |                |
| bill_date | date        | YES  |     | NULL    |                |
| gst       | int         | YES  |     | NULL    |                |
| st        | int         | YES  |     | NULL    |                |
+-----------+-------------+------+-----+---------+----------------+
6 rows in set (0.01 sec)
```

Table BOOKING:

```
mysql> desc booking;
+---------+-------------+------+-----+---------+----------------+
| Field   | Type        | Null | Key | Default | Extra          |
+---------+-------------+------+-----+---------+----------------+
| book_id | bigint      | NO   | PRI | NULL    | auto_increment |
| room_id | bigint      | YES  |     | NULL    |                |
| cust_id | bigint      | YES  |     | NULL    |                |
| doo     | date        | YES  |     | NULL    |                |
| dol     | date        | YES  |     | NULL    |                |
| advance | float(10,2) | YES  |     | NULL    |                |
+---------+-------------+------+-----+---------+----------------+
6 rows in set (0.00 sec)
```

Table CUSTOMER:

```
mysql> desc customer;
+-------------+-----------+------+-----+---------+----------------+
| Field       | Type      | Null | Key | Default | Extra          |
+-------------+-----------+------+-----+---------+----------------+
| id          | bigint    | NO   | PRI | NULL    | auto_increment |
| name        | char(50)  | YES  |     | NULL    |                |
| address     | char(100) | YES  |     | NULL    |                |
| phone       | char(15)  | YES  |     | NULL    |                |
| email       | char(80)  | YES  |     | NULL    |                |
| id_proof    | char(20)  | YES  |     | NULL    |                |
| id_proof_no | char(25)  | YES  |     | NULL    |                |
| males       | int       | YES  |     | NULL    |                |
| females     | int       | YES  |     | NULL    |                |
| children    | int       | YES  |     | NULL    |                |
+-------------+-----------+------+-----+---------+----------------+
10 rows in set (0.00 sec)
```

Table ROOMS:

```
mysql> desc rooms;
+-----------+-------------+------+-----+---------+----------------+
| Field     | Type        | Null | Key | Default | Extra          |
+-----------+-------------+------+-----+---------+----------------+
| id        | int         | NO   | PRI | NULL    | auto_increment |
| room_no   | int         | YES  |     | NULL    |                |
| room_type | char(20)    | YES  |     | NULL    |                |
| room_rent | float(10,2) | YES  |     | NULL    |                |
| room_bed  | char(20)    | YES  |     | NULL    |                |
| status    | char(20)    | YES  |     | NULL    |                |
+-----------+-------------+------+-----+---------+----------------+
6 rows in set (0.01 sec)
```

Table SETTING:

```
mysql> desc setting;
+------------+-----------+------+-----+---------+----------------+
| Field      | Type      | Null | Key | Default | Extra          |
+------------+-----------+------+-----+---------+----------------+
| id         | int       | NO   | PRI | NULL    | auto_increment |
| field_name | char(30)  | YES  |     | NULL    |                |
| value      | char(100) | YES  |     | NULL    |                |
+------------+-----------+------+-----+---------+----------------+
3 rows in set (0.00 sec)
```

Python

```
import mysql.connector
